

## PhD-/Master-Session

### **Chairpersons:**

Nadine Alpino (The State Library of Schleswig-Holstein) - Germany

Brigit Danthine (Austrian Academy of Science - Austrian Archaeological Institute) - Austria

### **Description and Motivation:**

A key feature of CHNT is its ability to bring together researchers from diverse fields and backgrounds, fostering a platform for the exchange of ideas. This dialogue benefits greatly from the contributions and perspectives of the younger generation of scientists. Their participation not only enriches the scientific conversation with fresh viewpoints but also provides them with a valuable opportunity to engage with their peers in the context of an international conference.

We therefore encourage students and recent graduates to present their ongoing or completed Master's or PhD thesis at the conference. We especially welcome novel ideas, innovative approaches, clever solutions, workarounds, and critical perspectives. While the topic of the presentation must fall within the scope of cultural heritage and new technologies, priority will be given to presentations that align with the key themes outlined in this year's conference description.

This session is designed to support and encourage young scientists who may be presenting for the first time at an international conference. To further promote

participation, the conference committee will waive entry fees for students under the age of 27 who present only at the PhD/Master session. In addition, accepted speakers will be eligible for the CHNT Best Student Paper award.

**Target Audience:**

Young Scientists, PhD-Students, Master-Students

**Keywords:**

Young Scientists, First Presentation, Empowering young talents
